OUTDOOR SOLUTIONS

## FIRE AND WEATHER RESISTANCE

Our frames are made of highly resistant extruded profiles, solid cast joints using only top-quality aluminium alloys. The roof covers are made of class 2 flame retardant PVC, divided into separate sections individually inserted into the grooves of the profiles.

## PRACTICAL ASSEMBLY

Structures come partially assembled, except the models Ready Box Garage and Ready Box 1 Tunnel which come fully assembled.

## EASY TO USE

Each module is fitted with aluminium pantographs and tensioners which enable the structure to be manually folded and opened.

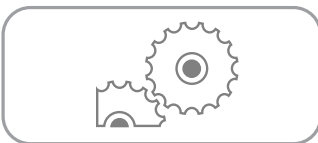

## EASY TO TRANSPORT

The structures are delivered with protection and are packed separately in order to guarantee optimal ease of handling during handling and transport phases.

## LONG LASTING

All materials used in manufacturing the frames and the roof covers are of the highest quality and are subjected to special treatments which render them long lasting.

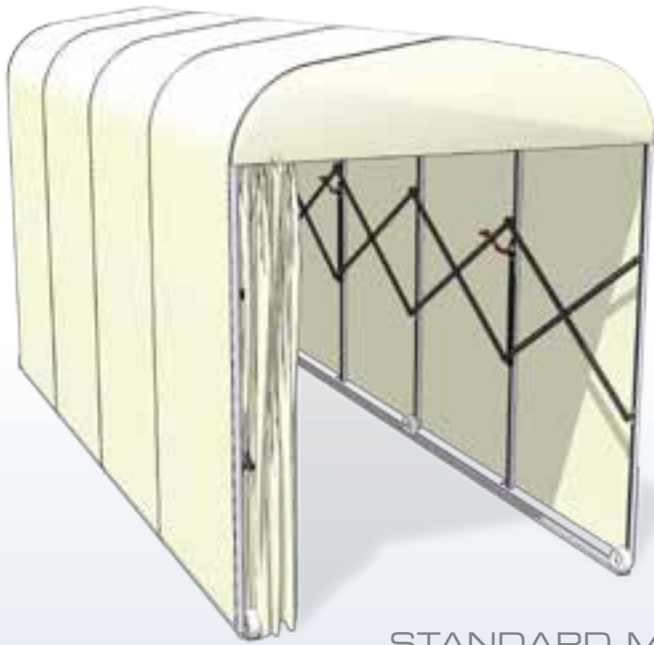

## CUSTOM MADE

The structure comes complete with wheels and tracks which are standard or optional depending on the model. Each model can be fitted with sliding side or back walls. Structure dimensions are custom made for the client. Advertising can be placed on the tunnel.
